

Here is the complete **Student-Facing Lesson Copy Deck (Part 1)**, followed by the **Web App UX Copy Deck (Part 2)**. You can copy and paste these directly into your course platform, Figma designs, or web app codebase.

PART 1: Full Lesson-by-Lesson Student Copy Deck

Below is the complete student-facing text for the core lesson of every module. The tone is calm, simple, and focused on safety and practical VA tasks.

Module 0: Amazon Basics Before PPC

Lesson Title: Where Do Ads Show Up on Amazon?

Estimated Time: 5 minutes

The Goal: Understand the difference between "free" results and "paid" ads.

Simple Explanation:

Imagine Amazon is a giant digital shelf. When a customer searches for "bamboo cutting board," Amazon shows them a list of products.

Some products are there because Amazon's algorithm thinks they are the best match. These are **Organic Results**. They are free.

Other products are there because the seller paid to be at the top or middle of the page. These are **Sponsored Results** (Ads).

Why This Matters to You:

As a VA, your job is to manage the **Sponsored** results. But you must always remember: if the organic product page is weak (bad photos, bad reviews), paying for ads won't fix it. Ads only bring people to the page; the page must make them buy.

Check Yourself:

1. If a seller stops paying for ads, do their organic results disappear? *(Answer: No.)*
2. What is the main goal of a Sponsored ad? *(Answer: To get the product seen faster.)*

Module 1: What is Amazon PPC?

Lesson Title: How the PPC Auction Works

Estimated Time: 10 minutes

The Goal: Learn what "Pay-Per-Click" actually means.

Simple Explanation:

PPC stands for **Pay-Per-Click**. This means the seller does *not* pay Amazon just to show the ad. The seller only pays when a real human clicks on it.

Because many sellers want the top spot, Amazon runs a silent, instant auction every time a customer searches. Sellers tell Amazon the maximum they are willing to pay for a click (the **Bid**). Amazon looks at the bids and the product relevance, then picks the winners to show on the screen.

Key Term:

* **Impression:** The ad was shown on the screen (Cost: \$0).

* **Click:** The customer clicked the ad (Cost: The bid amount).

Try It:

If your bid is \$1.00, and your ad gets 10 impressions but 0 clicks, how much did you spend?

(Answer: \$0.00. You only pay for clicks!)

Module 2: Money Math Every PPC Assistant Must Know

Lesson Title: Understanding ACOS and Profit Margin

Estimated Time: 15 minutes

The Goal: Learn the most important metric in Amazon PPC.

Simple Explanation:

ACOS stands for Advertising Cost of Sales. It tells you what percentage of your ad revenue was eaten up by ad costs.

Formula: $\text{Ad Spend} \div \text{Ad Sales} = \text{ACOS}$.

If you spend \$20 on ads and make \$100 in sales, your ACOS is 20%.

The Golden Rule:

ACOS does not tell you if you are making a profit. To know that, you must know the

Break-Even ACOS (which is usually the product's profit margin).

If the product's profit margin is 30%, and your ACOS is 20%, you are making a profit. If your ACOS is 40%, you are losing money on every sale.

Your Deliverable:

Open the *PPC Money Math Worksheet* and calculate the ACOS for the three practice campaigns.

Module 3: Campaign Structure

Lesson Title: Campaigns vs. Ad Groups

Estimated Time: 10 minutes

****The Goal:**** Understand how Amazon folders are organized.

****Simple Explanation:****

Think of your Amazon account like a filing cabinet.

1. ****The Campaign**** is the big drawer. It holds the ****Daily Budget**** and the ****Start/End Dates****.
2. ****The Ad Group**** is a folder inside the drawer. It holds the ****Products**** you are selling and the ****Targeting**** (Keywords).

****Why This Matters:****

If you put a \$50 budget on the Campaign, all the Ad Groups inside that Campaign must share that \$50. You cannot give individual budgets to Ad Groups.

****Check Yourself:****

Where do you go to change the daily spending limit? *(Answer: The Campaign level.)*

Module 4: Keywords and Match Types

****Lesson Title:**** Keywords vs. Search Terms

****Estimated Time:**** 15 minutes

****The Goal:**** Learn the difference between what you target and what customers type.

****Simple Explanation:****

A ****Keyword**** is what **you** tell Amazon to target (e.g., "cutting board").

A ****Search Term**** is what the **customer** actually types into the search bar (e.g., "red plastic cutting board for kids").

Your job as a VA is to look at the Search Term Report to see what customers are actually typing, and then decide if those terms are good or bad.

****Match Types:****

* ****Broad:**** Amazon can match loosely (e.g., "board for cutting"). High reach, high risk of waste.

* ****Phrase:**** Must include the phrase (e.g., "bamboo **cutting board** large"). Medium control.

* ****Exact:**** Must match almost perfectly. High control, lower reach.

Module 5: Listing Readiness

****Lesson Title:**** The Listing Readiness Check

****Estimated Time:**** 10 minutes

****The Goal:**** Learn when to tell your manager "Stop, don't run ads yet!"

****Simple Explanation:****

PPC is like pouring water into a bucket. If the bucket has holes (bad listing), the water (money) leaks out. Before you launch a campaign, check the product page:

1. Is the main image clear and professional?
2. Are there at least 10-15 good reviews?
3. Is the price competitive?
4. Is the product in stock?

****Your Action:****

If a client asks you to run ads on a product with 2 stars and blurry photos, your job is to use the **Listing Readiness Scorecard** and advise them to fix the page first.

Module 6: Campaign Setup for Beginners

****Lesson Title:**** Building Your First Auto Campaign

****Estimated Time:**** 20 minutes

****The Goal:**** Set up a safe "research" campaign.

****Simple Explanation:****

When launching a new product, we don't always know exactly what customers will type. So, we use an ****Automatic Campaign****.

In an Auto Campaign, you give Amazon the product and a budget, and Amazon's algorithm guesses the keywords based on your product page. We use this to "mine" for data. After a few weeks, we look at the data, find the winning words, and move them to a Manual Campaign.

****Safety Rule:****

Always name your campaigns clearly so you can find them later.

Format: [Brand] - [Product] - [Campaign Type] - [Goal]

Example: WoodCraft - Bamboo Board - Auto - Research

Module 7: Bids and Budgets

****Lesson Title:**** Setting Safe Starting Bids

****Estimated Time:**** 10 minutes

****The Goal:**** Learn how to bid without wasting the budget on day one.

****Simple Explanation:****

Amazon will suggest a bid range (e.g., \$0.75 to \$1.50). As a beginner, ****never start at the highest end of the range.****

Start in the middle or slightly below. If you bid too high, you might get 20 clicks in one hour, spend the whole daily budget, and have no data to show for it.

****The VA Rule:****

Make small bid changes (10% to 20% at a time). Never double a bid or cut it in half all at once.

Module 8: Search Term Mining and Negative Keywords

****Lesson Title:**** Finding the Wasters

****Estimated Time:**** 15 minutes

****The Goal:**** Learn how to stop the bleeding.

****Simple Explanation:****

The ****Search Term Report**** is your best friend. It shows every exact word a customer typed before clicking your ad.

If you sell a \$30 Bamboo Board, and you see 15 clicks on the search term "cheap plastic cutting board," you are wasting money. Those people will never buy your product.

You must add "plastic" and "cheap" as ****Negative Keywords****. This tells Amazon: "Never show my ad if the customer types these words."

****Your Deliverable:****

Complete the ***Search Term Cleanup Sheet*** using the provided practice data.

Module 9: Weekly Optimization Routine

****Lesson Title:**** The Safe Weekly Loop

****Estimated Time:**** 10 minutes

****The Goal:**** Build a repeatable habit.

****Simple Explanation:****

Amateur PPC managers log in every day, panic, and change 50 things. Professional VAs follow a weekly loop:

1. ****Monday:**** Check budgets and spend.
2. ****Tuesday:**** Download Search Term Report.
3. ****Wednesday:**** Add Negatives and move Winners to Exact.
4. ****Thursday:**** Adjust bids based on ACOS.
5. ****Friday:**** Write the Weekly Report.

****Safety Rule:****

After you make a change, ****wait 7 days**** before changing it again. Amazon's algorithm needs time to learn.

Module 10: Reporting and Explaining Results

****Lesson Title:**** Writing the Weekly Update

****Estimated Time:**** 15 minutes

****The Goal:**** Translate numbers into plain English for the client.

****Simple Explanation:****

Clients do not want a spreadsheet with 40 columns. They want to know:

1. Did we make money?
2. What did you do this week?
3. What are we doing next week?

Use the ***Weekly Report Template***. Always explain the "Why."

Bad: "ACOS is 40%."

Good: "ACOS is 40% because we are testing new broad keywords. We will pause the losers on Thursday."

Module 11: Troubleshooting Common Problems

****Lesson Title:**** "I'm Getting Clicks But No Sales!"

****Estimated Time:**** 15 minutes

****The Goal:**** Diagnose the most common PPC problem.

****Simple Explanation:****

If a campaign has 50 clicks and 0 sales, do not immediately blame the ads. Run through this checklist:

1. ****Is the search term relevant?**** (Did they search for "glass" when we sell "bamboo"?) -> ***Fix: Add negative.***
2. ****Is the price too high?**** (Are competitors \$10 cheaper?) -> ***Fix: Alert manager.***
3. ****Is the listing bad?**** (Are there new 1-star reviews?) -> ***Fix: Alert manager.***
4. ****Is it out of stock?**** -> ***Fix: Pause campaign immediately.***

Module 12: Virtual Assistant PPC Workflow

****Lesson Title:**** The VA Daily Checklist

****Estimated Time:** 5 minutes**

****The Goal:** Protect the account from disasters.**

****Simple Explanation:****

Every morning, before you optimize anything, do a "health check":

- * ☐ Did any campaign run out of budget yesterday?
- * ☐ Did any product go out of stock? (If yes, PAUSE the ads immediately so you don't pay for clicks on unavailable items).
- * ☐ Did the client send any urgent emails about price changes?

Module 13: Client Communication

****Lesson Title:** How to Ask for Approval**

****Estimated Time:** 10 minutes**

****The Goal:** Protect yourself and build trust.**

****Simple Explanation:****

As a junior VA, you should not make massive changes without asking. Use the ****Risk/Reward Template****.

Example: "Hi Client, I noticed the keyword 'large chopping block' has a 15% ACOS but low impressions. I suggest raising the bid from \$0.80 to \$1.00. ****Reward:**** More sales. ****Risk:**** Slightly higher CPC. Do I have your approval?"

Module 14: Capstone Project

****Lesson Title:** Your Final Test**

****Estimated Time:** 2 Hours**

****The Goal:** Prove you are ready for live accounts.**

****The Scenario:****

You have just been handed a new client selling "Organic Dog Shampoo." They have a \$500 monthly budget.

****Your Tasks:****

1. Check their listing readiness.
2. Build an Auto Campaign and a Manual Exact Campaign in the Sandbox.
3. Review the mock Search Term Report we provide.
4. Add 5 Negative Keywords.
5. Write a 1-paragraph email to the client explaining your first week's strategy.

Submit your Capstone Bundle to unlock your Certificate.

PART 2: Web App UX Copy Deck

Below is the UI/UX copy for the web application, covering navigation, states, modals, tooltips, and the simulator.

1. Global Navigation & Layout

Main Menu (Student Sidebar)

- *  Dashboard
- *  My Lessons
- *  Practice Simulator
- *  Worksheets & Templates
- *  PPC Glossary
- *  Ask the AI Coach
- *  My Certificates
- *  Settings

Top Header

- * **Greeting:** "Welcome back, [Name]"
- * **Streak/Points:** "🔥 4 Day Streak | 🏆 450 XP"
- * **Help Icon:** "Need help? Hover over any blue dotted word for a quick definition."

2. Dashboard States

Empty State (Brand New Student)

- * **Headline:** Welcome to Amazon PPC Training! 🚀
- * **Body:** You are starting from zero, and that is perfectly fine. We will take this one step at a time. Your first step is to understand how Amazon's search results work.
- * **Primary Button:** Start Module 0: Amazon Basics
- * **Secondary Link:** Take the 2-minute placement quiz instead.

Active State (In Progress)

- * **Headline:** Pick up where you left off.
- * **Progress Card:**
 - * Module 4: Keywords and Match Types*
 - * Lesson 2: Broad vs. Exact Match*
 - * Progress Bar: 60% Complete
- * **Button:** Continue Lesson

* **Weekly Goal Widget:** "Complete 3 practice simulator cases this week. (1/3 completed)"

Completion State (Course Finished)

* **Headline:** You did it! 🎓

* **Body:** You have completed all modules and passed the Capstone Project. You are officially a Certified Junior PPC Assistant.

* **Primary Button:** Download My Certificate

* **Secondary Button:** Review Past Lessons

3. Lesson Player UI

Video/Text Toggle

* [🎥 Watch Video] [📖 Read Text]

Glossary Tooltip (Hover State)

* *Trigger Word:* ACOS

* *Tooltip Text:* **ACOS (Advertising Cost of Sales):** The percentage of your ad sales that goes toward paying for the ads. Formula: $\text{Spend} \div \text{Sales}$. *(Click to open full Glossary)*

Action Buttons (Bottom of Lesson)

* **Secondary:** 📄 Download Worksheet

Quiz Section

* **Header:** Check Your Understanding

* **Submit Button:** Check My Answers

* **Success Toast:** ✅ Correct! You've got it.

* **Error State:** ❌ Not quite. Review the "Simple Explanation" section above and try again.

4. Interactive Simulator UI

Simulator Header

* **Title:** Practice Case: Bamboo Cutting Board

* **Status Badge:** 🟢 Safe Mode (No real money used)

Data Dashboard (Mock)

* *Spend:* \$22.00 | *Sales:* \$70.00 | *ACOS:* 31.4% | *Clicks:* 20

Decision Checkboxes

- * [] Add "plastic" as Negative Exact
- * [] Add "glass" as Negative Exact
- * [] Move "bamboo cutting board" to Manual Exact Campaign
- * [] Increase Daily Budget to \$50
- * [] Pause Campaign

****Submit Button:**** Submit My Decisions

****Feedback Modals (Post-Submission)****

* ****Scenario A: Good Choices****

* ****Headline:**** Great Job! 🌟

* ****Body:**** You correctly identified that "plastic" and "glass" are wasting your budget. Adding them as negatives will protect your client's money.

* ****Reward:**** +50 XP | Badge Unlocked: "Negative Ninja"

* ****Button:**** Next Case

* ****Scenario B: Risky Choices (Warning)****

* ****Headline:**** Wait! Let's review this. ⚠️

* ****Body:**** You chose to *Increase the Daily Budget to \$50*. However, your ACOS is currently 31.4%, which is higher than your 30% profit margin. Scaling the budget right now will scale your losses.

* ****Advice:**** Fix the wasted spend (negatives) first. Wait for the ACOS to drop below 30% before asking the client for more budget.

* ****Button:**** Try Again

* ****Scenario C: Destructive Choices (Red Flag)****

* ****Headline:**** 🚫 Risky Action Detected

* ****Body:**** You chose to *Pause the Campaign*. The campaign only has 20 clicks. In PPC, 20 clicks is not enough data to know if a product is failing. Pausing now means you stop learning.

* ****Rule to Remember:**** Never pause a campaign based on one day of low data.

* ****Button:**** Review Lesson 9 & Try Again

5. Artifact & Worksheet UI

****File Upload Area****

* ****Drag & Drop Zone:**** Drag your completed *Search Term Cleanup Sheet* here, or click to browse.

* ****Supported Formats:**** PDF, XLSX, CSV, JPG.

* ****Max Size:**** 10MB.

****Submission States****

- * ****Autosave Toast:****  Draft saved locally.
- * ****Pending Review:****  Submitted! Your teacher will review this within 24 hours.
- * ****Graded (Passed):****  Approved! Great job spotting those negative keywords.
- * ****Graded (Needs Work):****  Needs Revision. Your teacher left 2 comments on your sheet. Please review and resubmit.

6. AI Coach Interface ("Ask the Coach")

****Chat Input Placeholder:**** "Ask a question (e.g., 'Why is my CTR so low?')"

****Suggested Starter Prompts (Pills)****

- * [Explain ACOS like I'm 5]
- * [How do I write a client email?]
- * [What's the difference in Broad vs Exact?]

****AI Disclaimer (Pinned at top of chat):****

 The AI Coach is here to explain concepts and review practice data. It will never tell you to make risky changes to a live client account without manager approval.*

****AI Response Formatting:****

- * ***Concept Explanation:** Plain text.
- * ***Math Help:** Step-by-step formula breakdown.
- * ***Safety Warning:** Highlighted in yellow (e.g., "  Remember: Always check stock levels before increasing bids!").

7. System Messages & Toasts (Global)

****Success Toasts (Green)****

* **Headline:** ⚠ Attention Required

* **Body:** [Student Name] has failed the "Money Math" quiz 3 times and triggered 4 "Risky Action" warnings in the Simulator.

* **Button:** Send Intervention Message / Schedule 1-on-1

You are absolutely right, Ryan. I apologize for giving you summaries instead of the actual, word-for-word lesson copy.

Because the full syllabus contains over 100 individual micro-lessons, writing them all out in complete detail in a single message will exceed the system's length limit and cut off mid-sentence.

To give you the **exact, complete copy** you can copy and paste directly into your course platform, I will break this down into batches.

Here is the **complete, word-for-word student copy for Modules 0, 1, and 2 (26 full lessons)**. When you are ready, just reply **"Next"** and I will generate the next batch.

MODULE 0: Amazon Basics Before PPC

Lesson 1: What is Amazon Marketplace?

Goal: Understand the basic environment where we will be working.

Simple Explanation: Amazon Marketplace is a massive digital shopping mall. Instead of Amazon selling everything themselves, they allow independent businesses (called "Third-Party Sellers") to list and sell their products on Amazon's website. As a PPC Virtual Assistant, you will be working for these independent sellers, helping them get their products seen by shoppers.

Example: When you buy a phone case on Amazon, it might not be sold *by* Amazon. It might be sold by a small business called "TechGear," but it is fulfilled and shipped through Amazon's warehouses.

****Check Yourself:**** Who are the "Third-Party Sellers" on Amazon? *(Answer: Independent businesses that use Amazon's website to sell their products.)*

Lesson 2: What is a Seller Account?

****Goal:**** Learn where the seller manages their business.

****Simple Explanation:**** To sell on Amazon, a business must open a "Seller Account." This is their private backend dashboard, called Seller Central. From Seller Central, they can add new products, check their inventory, see their profits, and manage their advertising. As a VA, your client will eventually give you "User Permissions" to log into their Seller Central account so you can help them manage their ads.

****Example:**** Think of Seller Central like the cash register and back office of a physical store. The customer never sees it, but it is where the store owner runs the business.

****Check Yourself:**** What is the name of the private dashboard where sellers manage their Amazon business? *(Answer: Seller Central.)*

Lesson 3: What is a Product Listing?

****Goal:**** Understand the "storefront" for a single item.

****Simple Explanation:**** A "Product Listing" (also called a Detail Page) is the specific webpage a customer sees when they click on a product. It contains the product title, the main image, the price, the bullet points explaining the features, the description, and customer reviews.

****Why it matters to you:**** PPC ads do not sell the product; they only bring the customer to the Product Listing. If the listing has bad photos or terrible reviews, your ads will waste money because customers will click the ad, look at the bad listing, and leave without buying.

****Check Yourself:**** Name three things you will find on a Product Listing. *(Answer: Title, images, price, bullet points, reviews, etc.)*

Lesson 4: What is the Buy Box?

****Goal:**** Learn the most important button on Amazon.

****Simple Explanation:**** On a product listing, there is a section on the right side with the "Add to Cart" and "Buy Now" buttons. This section is called the "Buy Box." Sometimes, multiple sellers sell the exact same item. Amazon's algorithm chooses one seller to "win" the Buy Box. The seller who wins the Buy Box gets almost 100% of the sales.

****Why it matters to you:**** If your client loses the Buy Box (usually because their price is too high or they are out of stock), Amazon will automatically stop their PPC ads from showing. You cannot run ads if you do not have the Buy Box.

****Check Yourself:**** What happens to PPC ads if a seller loses the Buy Box? *(Answer: Amazon usually stops showing the ads.)*

Lesson 5: What is Organic Rank?

****Goal:**** Understand "free" placement on Amazon.

****Simple Explanation:**** When a customer types "bamboo cutting board" into the Amazon search bar, Amazon shows a list of results. The products that appear naturally because Amazon's algorithm thinks they are the most relevant and popular are called "Organic Results."

The seller did not pay for this placement; they earned it through good sales history and a strong listing.

****Example:**** If you sell a great cutting board and get lots of 5-star reviews, Amazon will naturally move you up to page 1 of the search results. That is organic rank.

****Check Yourself:**** Does a seller pay Amazon directly for organic rank? *(Answer: No, it is earned through relevance and sales.)*

Lesson 6: What is Paid Rank?

****Goal:**** Understand where ads appear.

****Simple Explanation:**** Paid rank (or Sponsored rank) is when a seller pays Amazon to show their product higher up in the search results than they would naturally appear. These results are usually marked with a tiny "Sponsored" tag.

****Why it matters to you:**** This is exactly what you will be managing. You are paying Amazon to skip the line and get your product in front of the customer immediately, rather than waiting months to build up organic rank.

****Check Yourself:**** How can a customer usually tell the difference between an organic result and a paid result? *(Answer: The paid result has a small "Sponsored" tag.)*

Lesson 7: Why Do Sellers Use Ads?

****Goal:**** Understand the core value of PPC.

****Simple Explanation:**** If organic rank is free, why pay for ads? Because getting to page 1 organically can take months or years. If a seller launches a brand new product, it will be buried on page 50 where no one will see it. By using PPC ads, the seller can place their new product on page 1 on the very first day. Once the ads generate sales, Amazon's algorithm notices, and the product's *organic* rank starts to improve, too.

****Example:**** It is like paying for a billboard on a busy highway to get your new restaurant noticed, rather than waiting for people to stumble upon it down a side street.

****Check Yourself:**** Why would a brand new product need PPC ads? *(Answer: To get seen immediately on page 1 while it waits to build organic rank.)*

MODULE 1: What is Amazon PPC?

Lesson 1: What Does PPC Mean?

****Goal:**** Define the core term of the course.

****Simple Explanation:**** PPC stands for ****Pay-Per-Click****. It is a type of advertising where the seller does *not* pay Amazon just to show the ad to people. The seller only pays Amazon when a real human actually *clicks* on the ad. If 1,000 people see the ad but nobody clicks it, the cost to the seller is \$0.

****Example:**** Imagine handing out flyers. With traditional advertising, you pay for 1,000 flyers whether people read them or throw them away. With PPC, you only pay when someone takes the flyer and walks into your store.

****Check Yourself:**** If your ad is shown 50 times but gets 0 clicks, how much do you pay Amazon? ***(Answer: \$0.)***

Lesson 2: How Does Amazon Decide Which Ads to Show?

****Goal:**** Understand the ad selection process.

****Simple Explanation:**** There are thousands of sellers who want to show their ads for the search term "bamboo cutting board." But Amazon only has a few ad spaces on the screen. Amazon decides who gets the space by looking at two main things:

1. ****The Bid:**** How much money the seller is willing to pay for a click.
 2. ****Relevance:**** How closely the product matches what the customer is searching for.
- Amazon wants to make money, but they also want the customer to be happy. They will not show a dog toy to someone searching for a cutting board, even if the dog toy seller offers a lot of money.

****Check Yourself:**** Will Amazon show an ad just because the seller offered the highest bid?

(Answer: No, the product must also be relevant to the search.)

Lesson 3: What is an Auction?

****Goal:**** Learn how ad space is bought.

****Simple Explanation:**** Every time a customer searches for something on Amazon, a silent, invisible "auction" happens in a fraction of a second. All the sellers who want to show an ad for that search term submit their maximum price. Amazon picks the winners, shows their ads, and the auction is over. This happens millions of times a day.

****Example:**** It is like an auction house, but instead of raising your hand, you tell the auctioneer your maximum budget in advance, and the auctioneer instantly picks the winner.

****Check Yourself:**** How long does an Amazon PPC auction take? ***(Answer: A fraction of a second.)***

Lesson 4: What is a Bid?

****Goal:**** Understand the maximum price you pay.

****Simple Explanation:**** A "Bid" is the absolute maximum amount of money you are telling Amazon you are willing to pay for one single click. If you set your bid to \$1.00, Amazon will try to get you clicks for \$1.00 or less. Amazon will never charge you \$1.05 if your bid is \$1.00.

****Why it matters to you:**** Setting bids is one of your main jobs as a VA. If you bid too low, you lose the auction and get no clicks. If you bid too high, you waste the client's money.

****Check Yourself:**** If your bid is \$1.50, is it possible for Amazon to charge you \$1.20 for a click?

(Answer: Yes, you only pay what is needed to win the auction, up to your maximum bid.)

Lesson 5: What is a Click?

****Goal:**** Define the action that costs money.

****Simple Explanation:**** A click happens when a shopper uses their mouse or finger to tap on your Sponsored Ad. The moment they click, they are taken to your Product Listing, and your client's credit card is charged the cost of that click.

****Why it matters to you:**** Your job is to make sure the clicks you are paying for are from **relevant** shoppers. If you sell a premium \$40 cutting board, you do not want to pay for clicks from people looking for a \$5 plastic cutting board.

****Check Yourself:**** What happens the exact moment a customer clicks your ad? **(Answer: They go to your listing, and you are charged for the click.)**

Lesson 6: What is an Impression?

****Goal:**** Define ad visibility.

****Simple Explanation:**** An "Impression" simply means your ad was loaded and shown on the customer's screen. If a customer searches for "cutting board" and your ad appears on page 1, that is 1 impression. If they scroll down and see it again, that might be another impression. Impressions are free. You are never charged for impressions.

****Example:**** Think of an impression like a car driving past your billboard. The driver saw it (impression), but they didn't stop at your store (click).

****Check Yourself:**** Does Amazon charge you for impressions? **(Answer: No, impressions are free.)**

Lesson 7: What is a Sale?

****Goal:**** Define the ultimate goal.

****Simple Explanation:**** A sale (or "Conversion") happens when a customer clicks your ad and then buys the product. In Amazon PPC, if a customer clicks your ad and buys **any** of your products within 7 days, Amazon counts that as an "Advertised Sale" and gives your campaign credit for it.

****Why it matters to you:**** Getting clicks is easy. Getting sales is hard. Your ultimate goal as a PPC manager is to get as many sales as possible for the lowest amount of ad spend.

****Check Yourself:**** If a customer clicks your ad today, but waits 5 days to buy the product, does it count as an ad sale? **(Answer: Yes, Amazon tracks sales for 7 days after a click.)**

MODULE 2: Money Math Every PPC Assistant Must Know

Lesson 1: Spend

****Goal:**** Understand ad costs.

****Simple Explanation:**** "Spend" (or Ad Spend) is the total amount of money that was deducted from the seller's account to pay for clicks during a specific time period.

***Formula:** Total Clicks × Average Cost Per Click = Spend.*

****Example:**** If you get 10 clicks and each click costs \$1.00, your Spend is \$10.00.

****Check Yourself:**** If you get 20 clicks at \$0.50 each, what is your Spend? **(Answer: \$10.00)**

Lesson 2: Sales (Ad Sales)

****Goal:**** Understand revenue generated by ads.

****Simple Explanation:**** "Sales" (or Ad Sales / Attributed Sales) is the total dollar amount of revenue generated from customers who clicked on your ad.

****Example:**** If a customer clicks your ad and buys a \$25 cutting board, your Ad Sales is \$25. If they buy two of them, your Ad Sales is \$50.

****Check Yourself:**** If a customer clicks an ad and buys a \$30 item, what is the Ad Sales?

(Answer: \$30)

Lesson 3: Clicks

****Goal:**** Understand traffic volume.

****Simple Explanation:**** Clicks are the total number of times shoppers tapped on your ad. This is the raw traffic you are buying from Amazon. More clicks mean more data, but also more spend.

****Example:**** 50 people saw your ad, and 5 of them tapped it. Your Clicks = 5.

****Check Yourself:**** Which metric costs the seller money: Impressions or Clicks? ***(Answer: Clicks)***

Lesson 4: Impressions

****Goal:**** Understand visibility volume.

****Simple Explanation:**** Impressions are the total number of times your ad was displayed on a screen. High impressions mean Amazon is showing your ad a lot. Low impressions mean your ad is rarely being shown (usually because your bid is too low or your product is not relevant).

****Example:**** Your ad showed up on page 1 for 500 different shoppers today. Impressions = 500.

****Check Yourself:**** If your impressions are zero, what is the most likely problem? ***(Answer: Your bid is too low, or your campaign is paused.)***

Lesson 5: CPC (Cost-Per-Click)

****Goal:**** Understand the average cost of traffic.

****Simple Explanation:**** CPC is the average amount you actually paid for each click. Remember, you set a *maximum bid*, but Amazon often charges you slightly less. CPC is the reality of what you paid.

***Formula:** $\text{Total Spend} \div \text{Total Clicks} = \text{CPC}.$ *

****Example:**** You spent \$20.00 and got 10 clicks. $\$20 \div 10 = \2.00 CPC.

****Check Yourself:**** If Spend is \$50 and Clicks are 25, what is the CPC? ***(Answer: \$2.00)***

Lesson 6: CTR (Click-Through Rate)

****Goal:**** Understand ad attractiveness.

****Simple Explanation:**** CTR tells you how appealing your ad is. It is the percentage of people who saw your ad (impressions) and actually clicked it. A high CTR means your main image and price look great. A low CTR means people are seeing it but ignoring it.

***Formula:** $(\text{Clicks} \div \text{Impressions}) \times 100 = \text{CTR}.$ *

****Example:**** 100 people saw the ad. 5 clicked it. $5 \div 100 = 0.05$. Multiply by 100 = 5% CTR. (A good CTR on Amazon is usually between 0.3% and 0.7%).

****Check Yourself:**** If you have 1,000 impressions and 10 clicks, what is your CTR? ***(Answer: 1%)***

Lesson 7: Conversion Rate (CVR)

****Goal:**** Understand listing effectiveness.

****Simple Explanation:**** Conversion Rate tells you how good the Product Listing is at turning visitors into buyers. It is the percentage of clicks that resulted in a sale. If you have a high Conversion Rate, your listing, price, and reviews are strong.

***Formula:** $(\text{Total Orders} \div \text{Total Clicks}) \times 100 = \text{Conversion Rate}.$ *

****Example:**** You got 20 clicks. 2 people bought the product. $2 \div 20 = 0.10$. Multiply by 100 = 10% Conversion Rate.

****Check Yourself:**** If you get 100 clicks and 15 orders, what is your Conversion Rate?

(Answer: 15%)

Lesson 8: ACOS (Advertising Cost of Sales)

****Goal:**** Learn the most important PPC metric.

****Simple Explanation:**** ACOS tells you how much of your ad revenue was eaten up by ad costs. It shows the efficiency of your campaign. Lower ACOS is generally better.

***Formula:** $(\text{Total Spend} \div \text{Total Ad Sales}) \times 100 = \text{ACOS}.$ *

****Example:**** You spent \$20 on ads. Those ads generated \$100 in sales. $\$20 \div \$100 = 0.20$. Multiply by 100 = 20% ACOS. This means 20 cents of every dollar you made went to paying Amazon for ads.

****Check Yourself:**** If Spend is \$30 and Ad Sales is \$150, what is the ACOS? ***(Answer: 20%)***

Lesson 9: ROAS (Return on Ad Spend)

****Goal:**** Learn the alternative to ACOS.

****Simple Explanation:**** ROAS is the exact opposite of ACOS. Instead of looking at cost, it looks at return. It tells you how many dollars you made for every \$1 you spent on ads. Higher ROAS is better.

***Formula:** $\text{Total Ad Sales} \div \text{Total Spend} = \text{ROAS}.$ *

****Example:**** You spent \$20. You made \$100. $\$100 \div \$20 = 5$. Your ROAS is 5 (or 5x). For every \$1 you gave Amazon, they gave you \$5 back in sales.

****Check Yourself:**** If Spend is \$50 and Sales is \$200, what is the ROAS? ***(Answer: 4)***

Lesson 10: TACoS (Total Advertising Cost of Sales)

****Goal:**** Understand the big picture of the business.

****Simple Explanation:**** ACOS only looks at *ad* sales. TACoS looks at *total* sales (ad sales + organic sales). It tells you how much of the client's entire business revenue is being spent on ads. It is the best metric to see if PPC is actually helping the business grow organically.

***Formula:** $(\text{Total Ad Spend} \div \text{Total Account Revenue}) \times 100 = \text{TACoS}.$ *

****Example:**** You spent \$100 on ads. The seller made \$1,000 total (from ads and organic). $\$100 \div \$1,000 = 10\%$ TACoS.

****Check Yourself:**** Why is TACoS often considered a better "health" metric than ACOS?

(Answer: Because it includes organic sales, showing the true impact of ads on the whole business.)

Lesson 11: Break-Even ACOS

****Goal:**** Learn when you are losing money.

****Simple Explanation:**** Your Break-Even ACOS is exactly equal to your Profit Margin **before** ad spend. If your ACOS is higher than your Break-Even ACOS, you are losing money on every sale. If it is lower, you are making a profit.

****Example:**** A cutting board sells for \$30. It costs \$10 to make and ship. The profit left over is \$20. \$20 is 66% of the \$30 price. Therefore, the Break-Even ACOS is 66%. If your PPC ACOS is 70%, you are losing money. If it is 40%, you are profitable.

****Check Yourself:**** If a product has a 30% profit margin, what is its Break-Even ACOS?

(Answer: 30%)

Lesson 12: Profit Margin

****Goal:**** Understand the client's bottom line.

****Simple Explanation:**** Profit Margin is the percentage of the sale price that the seller actually gets to keep after paying for manufacturing, shipping, and Amazon fees. You **must** know the client's profit margin to know if your PPC campaigns are actually making them money or just generating empty revenue.

****Example:**** Price = \$100. Amazon fees = \$30. Product cost = \$40. Total costs = \$70. Profit = \$30. The Profit Margin is 30%.

****Check Yourself:**** Why is it dangerous to run PPC ads without knowing the product's profit margin? **(Answer: You might think a 40% ACOS is good, but if the margin is only 30%, the client is losing money on every sale.)**

****End of Batch 1 (Modules 0, 1, and 2). ****

Ryan, just reply *****Next***** and I will immediately generate the complete, word-for-word student copy for ****Modules 3, 4, and 5**** (Campaign Structure, Keywords & Match Types, and Listing Readiness).

Here is the ****complete, word-for-word student copy for Modules 6, 7, and 8****.

These modules are the core of the day-to-day VA job: building the campaigns, setting the financial limits, and cleaning up the data.

When you are ready for the final batch (Modules 9 through 14), just reply *****Next*****.

MODULE 6: Campaign Setup for Beginners

Lesson 1: Automatic Campaigns (The Research Tool)

****Goal:**** Understand how to let Amazon find keywords for you.

****Simple Explanation:**** In an ****Automatic Campaign****, you do not choose the keywords. You just give Amazon the product and a budget, and Amazon's algorithm reads your product page and guesses which search terms are relevant.

****Why it matters to you:**** We use Auto campaigns as a "research tool." Because Amazon tests thousands of searches, the Auto campaign will find unexpected keywords that real customers are using. We let it run, watch the data, and "mine" it for good keywords later.

****Check Yourself:**** Do you choose the keywords in an Automatic Campaign? *(Answer: No, Amazon chooses them based on your listing.)*

Lesson 2: Manual Campaigns (The Control Tool)

****Goal:**** Understand how to take control of your targeting.

****Simple Explanation:**** In a ****Manual Campaign****, you are the boss. You tell Amazon exactly which keywords or competitor products you want to target, and you set a specific bid for each one. If you do not add a keyword to a Manual Campaign, your ad will never show for it.

****Why it matters to you:**** Once we find winning keywords from our Automatic Campaign, we move them into a Manual Campaign so we can control the bids and force Amazon to show our ad for those specific, profitable words.

****Check Yourself:**** Which campaign type gives you total control over exactly which keywords you bid on? *(Answer: Manual Campaign.)*

Lesson 3: The Beginner 2-Campaign Strategy

****Goal:**** Learn the safest way to launch a new product.

****Simple Explanation:**** When a client gives you a new product, do not build 10 complicated campaigns. Start with the "Beginner 2-Campaign Strategy":

1. ****Campaign 1: Auto Research.**** Set a small budget (\$10/day). Let Amazon find search terms.
2. ****Campaign 2: Manual Exact.**** Set a small budget (\$10/day). Add the 5 to 10 most obvious, highly relevant keywords you can think of using Exact Match.

This keeps the account clean, safe, and easy to read while you gather data.

****Check Yourself:**** What is the main purpose of the Auto campaign in this strategy? *(Answer: To research and find new search terms.)*

Lesson 4: Naming Conventions

****Goal:**** Learn how to name campaigns so you don't get lost.

****Simple Explanation:**** Amazon allows you to name campaigns whatever you want. Lazy managers name them "Campaign 1" or "Test." This is a disaster. In a few months, the account will have 100 campaigns and you won't know what they do.

****The VA Rule:**** Always use a strict naming formula.

***Formula:** [Ad Type] | [Match Type] | [Product Name] | [Goal]*

***Example:** SP | Auto | Bamboo Cutting Board | Research

***Example:** SP | Exact | Bamboo Cutting Board | Top Keywords

(Note: SP stands for Sponsored Products).

****Check Yourself:**** Why is a strict naming convention important? *(Answer: So you can easily find and understand campaigns when the account gets large.)*

Lesson 5: Choosing the Right Products to Advertise

****Goal:**** Avoid advertising the wrong variations.

****Simple Explanation:**** Many products have variations (like a t-shirt that comes in Small, Medium, and Large, or Red, Blue, and Black). Usually, you only want to advertise the "Hero" variation—the one with the most reviews and the best main image. If you advertise a weird color that nobody wants, you will pay for clicks but get no sales.

****The VA Check:**** Before building a campaign, check which variation is winning the Buy Box and has the best reviews. Only put that variation in your Ad Group.

****Check Yourself:**** Should you put all 10 color variations of a product into your first Auto campaign? *(Answer: No, usually just the main "Hero" variation with the best reviews.)*

MODULE 7: Bids and Budgets

Lesson 1: What is a Daily Budget?

****Goal:**** Understand the daily spending cap.

****Simple Explanation:**** The Daily Budget is the maximum amount of money you are willing to spend on a specific campaign per day. If you set a Campaign budget to \$20, Amazon will try to stop showing your ads once you hit \$20 in spend for that day.

****Warning:**** Amazon's system is not perfect. On very high-traffic days, Amazon might accidentally spend up to 20% over your budget, but they will average it out over the month. Still, treat the daily budget as a hard limit.

****Check Yourself:**** If your daily budget is \$15, is it guaranteed Amazon will never spend \$16? *(Answer: No, Amazon can occasionally slightly exceed it on high-traffic days, but it averages out.)*

Lesson 2: How Budget and Bid Work Together

****Goal:**** Learn the math of traffic.

****Simple Explanation:**** Your Budget is your total wallet for the day. Your Bid is the price of one click.

If your Budget is \$20, and your average Bid (CPC) is \$1.00, you will get about 20 clicks a day.

If your Bid is \$2.00, you will only get about 10 clicks a day before your budget runs out.

****Why it matters to you:**** If your bids are too high, your budget will run out by 9:00 AM, and your ad will disappear for the rest of the day.

****Check Yourself:**** If you have a \$10 daily budget and a \$2.00 bid, roughly how many clicks will you get? *(Answer: About 5 clicks.)*

Lesson 3: Starting Bids for Beginners

****Goal:**** Learn how to bid safely without wasting money.

****Simple Explanation:**** When you create a Manual Campaign, Amazon will show a "Suggested Bid Range" (for example: \$0.80 to \$1.50). Beginners often panic and set their bid to the highest number (\$1.50) to guarantee they show up. ****Do not do this.****

****The VA Rule:**** Always start your bids in the lower-middle of the suggested range (e.g., \$0.90). It is much safer to start low, see if you get impressions, and slowly raise the bid by \$0.10 than to start too high and waste the client's money on day one.

****Check Yourself:**** If Amazon suggests a bid range of \$1.00 to \$2.00, what is a safe starting bid? *(Answer: Around \$1.00 to \$1.20. Never start at the absolute top.)*

Lesson 4: When to Lower Bids

****Goal:**** Learn how to protect profit margins.

****Simple Explanation:**** You should lower a bid when a keyword is getting sales, but the ACOS is way above the Break-Even point (meaning you are losing money). By lowering the bid, you lower your Cost-Per-Click (CPC), which gives the product a better chance to be profitable.

****The VA Rule:**** Never lower a bid by more than 10% to 20% at a time. If you drop a bid from \$2.00 to \$0.50 all at once, you will kill the keyword's momentum and it might never get impressions again.

****Check Yourself:**** If a keyword has a 60% ACOS and your profit margin is 30%, what should you do to the bid? *(Answer: Lower it slightly, by about 10-20%.)*

Lesson 5: When to Raise Bids

****Goal:**** Learn how to scale winning keywords.

****Simple Explanation:**** You should raise a bid when a keyword has a very low ACOS (highly profitable) but low impressions. This means the keyword is great, but you are losing the auction to competitors. Raising the bid slightly will win you more placement and more sales.

****The VA Rule:**** Just like lowering bids, only raise them by 10% to 20% at a time. Wait 4 to 7 days after raising a bid to see how it performs before touching it again.

****Check Yourself:**** Why should you wait 4 to 7 days after changing a bid? *(Answer: To give Amazon's algorithm time to adjust and gather enough data.)*

MODULE 8: Search Term Mining and Negative Keywords

Lesson 1: The Search Term Report

****Goal:**** Find the most important document in your PPC account.

****Simple Explanation:**** The Search Term Report is a downloadable spreadsheet that shows every single word a customer typed into Amazon before clicking your ad. It shows how many clicks each search term got, how much money it spent, and if it resulted in a sale.

****Why it matters to you:**** This report is where you do your actual "work" as a VA. You will download this report once a week to find out what is working and what is wasting money.

****Check Yourself:**** Where do you go to see the exact words customers typed to trigger your ad? *(Answer: The Search Term Report.)*

Lesson 2: How to Find "Wasters"

****Goal:**** Learn how to stop the bleeding.

****Simple Explanation:**** A "Waster" is a search term that eats your budget without bringing in sales.

Look at your Search Term Report and filter for terms with ****High Clicks and Zero Sales****.

Example: You sell a \$30 bamboo board. You see the search term "cheap plastic cutting board" has 15 clicks and 0 sales. This is a Waster. The customer wants plastic, not bamboo. You are paying for clicks from people who will never buy your product.

****Check Yourself:**** If a search term has 20 clicks, \$15 in spend, and 0 sales, what is it?

(Answer: A Waster.)

Lesson 3: How to Add Negative Keywords

****Goal:**** Learn how to block bad traffic.

****Simple Explanation:**** When you find a Waster, you must add it as a ****Negative Keyword****. This builds a "block list."

There are two ways to block:

1. ****Negative Exact:**** Blocks that exact phrase only. (Use this if the whole phrase is bad, like "glass cutting board").
2. ****Negative Phrase:**** Blocks any search that **contains** that word. (Use this for single bad materials or intents, like adding "plastic" as a Negative Phrase. This blocks "plastic board", "red plastic board", etc.).

****Check Yourself:**** If you want to block the word "free" from appearing anywhere in a customer's search, which negative match type should you use? ***(Answer: Negative Phrase.)***

Lesson 4: How to Find "Winners"

****Goal:**** Learn how to spot highly profitable searches.

****Simple Explanation:**** A "Winner" is a search term that has generated multiple sales at a great ACOS (below the Break-Even margin).

Example: You see the search term "extra large bamboo chopping block" has 5 clicks, 2 sales, and a 15% ACOS. This is a Winner! Customers are typing this exact phrase and buying your product.

****Check Yourself:**** What two metrics tell you a search term is a Winner? ***(Answer: Multiple sales and a low/profitable ACOS.)***

Lesson 5: The "Harvesting" Process

****Goal:**** Learn the core weekly optimization loop.

****Simple Explanation:**** "Harvesting" is the process of taking a Winner from your Automatic Campaign and moving it to your Manual Exact Campaign.

Why do we do this? In the Auto campaign, you can't control the bid for that specific phrase. By copying the exact search term and pasting it into a Manual Exact campaign, you take total control. You can give it a higher budget, adjust the bid, and force Amazon to show your ad for that profitable word.

****The VA Weekly Task:**** Download report -> Find Winners -> Copy them -> Paste them into the Manual Exact Campaign.

****Check Yourself:**** Why do we move winning search terms from an Auto campaign to a Manual Exact campaign? *(Answer: To take total control of the bids and targeting for that specific, profitable phrase.)*

****End of Batch 3 (Modules 6, 7, and 8). ****

Ryan, just reply *****Next***** and I will generate the ****final batch****, covering ****Modules 9 through 14**** (Weekly Optimization, Reporting, Troubleshooting, VA Workflow, Client Communication, and the Capstone Project).

Here is the ****final batch****, Ryan. This covers ****Modules 9 through 14****, completing the entire student-facing copy deck.

These final modules focus on the daily habits, problem-solving, client communication, and the final test that turns a beginner into a competent, hireable Virtual Assistant.

MODULE 9: Weekly Optimization Routine

Lesson 1: Why We Optimize Weekly, Not Daily

****Goal:**** Learn the most important rule of PPC patience.

****Simple Explanation:**** Beginners log into Amazon every single day, see that a keyword didn't get a sale yesterday, and panic-change the bid. This is a huge mistake. Amazon's algorithm needs time to learn, and customers don't buy things on a perfect daily schedule.

****The VA Rule:**** We only make optimization changes (like changing bids or pausing keywords) ****once a week****. We look at 7 to 14 days of data at a time. Daily logins are only for "health checks" (making sure nothing is broken).

****Check Yourself:**** If a keyword gets 5 clicks on Monday and 0 sales, should you pause it on Tuesday? *(Answer: No. 5 clicks is not enough data. Wait until the end of the week to review it.)*

Lesson 2: The Weekly Health Check

****Goal:**** Learn what to do when you log in daily.

****Simple Explanation:**** Even though we don't **change** bids daily, we still log in to protect the account. Your daily health check takes 5 minutes:

1. Are any campaigns out of budget? (If yes, note it).
2. Did any products go out of stock? (If yes, PAUSE the ads immediately).
3. Did the client lose the Buy Box? (If yes, ads will stop automatically, but verify).

****Check Yourself:**** What is the only campaign setting you should change during a daily health check? *(Answer: Pausing campaigns if the product goes out of stock.)*

Lesson 3: The "One Change at a Time" Rule

****Goal:**** Learn how to test safely.

****Simple Explanation:**** If a campaign is performing poorly, you might be tempted to lower the bid, add 10 negative keywords, and change the campaign budget all at the same time. If performance suddenly gets better, you won't know which change fixed it. If it gets worse, you won't know what broke it.

****The VA Rule:**** Make one logical change. Wait a week. See what happens. Then make the next change.

****Check Yourself:**** Why is it bad to change 10 different settings on a campaign on the same day? *(Answer: You won't know which change caused the result.)*

Lesson 4: Documenting Your Changes

****Goal:**** Learn how to keep a "Change Log."

****Simple Explanation:**** A Change Log is a simple spreadsheet where you write down every change you make to a live account.

***Columns:** Date | Campaign Name | What I Changed | Why I Changed It.*

If the client asks, "Why did my spend drop on Thursday?", you can look at your log and say, "I lowered the bid on Keyword X because the ACOS was 60%." This makes you look incredibly professional.

****Check Yourself:**** What is the purpose of a Change Log? *(Answer: To track what changes were made and why, so you can explain them to the client or manager later.)*

MODULE 10: Reporting and Explaining Results

Lesson 1: Why Reports Matter

****Goal:**** Understand that reporting builds client trust.

****Simple Explanation:**** Clients pay for ads, but they don't understand the Amazon dashboard. If you just send them a screenshot of a confusing Amazon spreadsheet, they will feel anxious. Your job is to translate the data into plain English. A good report tells the client: "Your money is safe, and here is what we are doing with it."

****Check Yourself:**** Why shouldn't you just send the client a raw export of the Amazon Search Term Report? *(Answer: It is too confusing and overwhelming for a non-PPC expert.)*

Lesson 2: The 5 Core Metrics to Include

****Goal:**** Learn what numbers actually matter to the client.

****Simple Explanation:**** Every weekly report must include these 5 numbers:

1. ****Spend:**** How much of their money we used.
2. ****Sales:**** How much revenue the ads generated.
3. ****ACOS:**** The efficiency of the spend.
4. ****Orders:**** How many actual units were sold.
5. ****CPC:**** The average cost of traffic.

****Check Yourself:**** If a client asks, "How many products did the ads sell?", which metric do you give them? *(Answer: Orders / Unit Sales.)*

Lesson 3: Explaining the "Why"

****Goal:**** Learn to add context to the numbers.

****Simple Explanation:**** Numbers without context are useless.

Bad Report: "ACOS went up to 40%." (Client panics).

Good Report: "ACOS went up to 40% **because** we launched a new Broad Match campaign to test new keywords. This is expected for the first week. We will pause the losers on Friday." (Client relaxes).

Always explain **why** a number changed.

****Check Yourself:**** If spend dropped by 50% this week, what should you explain to the client?

(Answer: Why it dropped. For example, "We paused 3 unprofitable keywords to save budget.")

Lesson 4: The "Wins, Problems, Next Steps" Format

****Goal:**** Learn the perfect report structure.

****Simple Explanation:**** Keep your weekly email or report incredibly simple. Use this exact structure:

*** **The Numbers:**** (Spend, Sales, ACOS, Orders).

*** **Wins:**** What worked well this week? (e.g., "Found 3 great new keywords").

*** **Problems:**** What didn't work? (e.g., "Competitor dropped their price, lowering our conversion rate").

*** **Next Steps:**** What are you doing next week to fix the problems? (e.g., "Adding negative keywords and testing a new bid").

****Check Yourself:**** What goes in the "Next Steps" section of a report? ***(Answer: The actions you plan to take in the upcoming week based on this week's data.)***

MODULE 11: Troubleshooting Common Problems

Lesson 1: "My Ad Has Zero Impressions!"

****Goal:**** Diagnose an ad that isn't showing up.

****Simple Explanation:**** If impressions are zero, Amazon is refusing to show your ad. Check these three things in order:

1. ****Is the bid too low?**** (Raise it by 20%).

2. ****Is the campaign out of budget?**** (Increase the daily budget).

3. ****Is the product out of stock or missing the Buy Box?**** (If yes, you can't run ads. Fix the inventory first).

****Check Yourself:**** If your bid is \$0.10 and competitors are bidding \$1.50, what will happen to your impressions? ***(Answer: They will be zero or very close to zero because you are losing every auction.)***

Lesson 2: "I'm Getting Impressions, But Zero Clicks!"

****Goal:**** Diagnose a low Click-Through Rate (CTR).

****Simple Explanation:**** If Amazon is showing your ad (impressions) but nobody is clicking it, the customer doesn't like what they see on the search results page.

Check these:

1. ****Main Image:**** Is it ugly or blurry?
2. ****Price:**** Are you \$15 more expensive than the product right next to you?
3. ****Reviews:**** Do you have 2 stars while the competitor has 4.5 stars?

***Note:** As a VA, you cannot fix the image or price yourself. You must alert the manager to fix the listing.*

****Check Yourself:**** Who fixes a bad main image: the PPC VA or the Listing Manager?

(Answer: The Listing Manager. The VA just flags the problem.)

Lesson 3: "I'm Getting Clicks, But Zero Sales!"

****Goal:**** Diagnose a low Conversion Rate.

****Simple Explanation:**** This is the most common problem. People click the ad, but leave without buying.

First, check the ****Search Term Report****. Are you paying for clicks from people searching for "free" or "used" items? If yes, add negatives.

Second, check the ****Listing****. Did a customer recently leave a 1-star review with photos? Did the price go up?

****Check Yourself:**** What is the first report you should download if a campaign has 50 clicks and 0 sales? ***(Answer: The Search Term Report, to see if the clicks are irrelevant.)***

Lesson 4: "My ACOS is Extremely High!"

****Goal:**** Diagnose a bleeding campaign.

****Simple Explanation:**** High ACOS means you are spending too much to get a sale.

Look at your CPC (Cost Per Click). Is it too high? If yes, lower the bids.

Look at your Conversion Rate. Is it very low? If yes, your listing or price is the problem.

****The VA Rule:**** Don't just pause the whole campaign. Find the specific 2 or 3 keywords that are eating the budget with no sales, and pause **those** or add them as negatives.

****Check Yourself:**** If your CPC is \$3.00, but your product only makes \$2.00 in profit, what will happen to your ACOS? ***(Answer: It will be incredibly high, and you will lose money on every sale.)***

MODULE 12: Virtual Assistant PPC Workflow

Lesson 1: The VA Daily Routine (15 Minutes)

****Goal:**** Build your morning habit.

****Simple Explanation:**** Every morning, open the Amazon dashboard and do this 15-minute routine:

1. Check total spend vs. total budget.
2. Check for "Out of Stock" alerts (Pause ads if needed).
3. Check for "Buy Box" alerts.

4. Read any urgent emails from the client.

Do not change bids. Do not pause keywords. Just observe and protect.

****Check Yourself:**** How long should the daily health check take? *(Answer: About 15 minutes.)*

Lesson 2: The VA Weekly Routine (1-2 Hours)

****Goal:**** Build your optimization habit.

****Simple Explanation:**** Pick one day a week (e.g., Wednesday) to be your "Optimization Day."

1. Download the Search Term Report for the last 7-14 days.
2. Add Negative Keywords for wasters.
3. Move Winners to the Exact Match campaign.
4. Adjust bids up or down by 10-20% based on ACOS.
5. Update your Change Log.

****Check Yourself:**** How many days of data should you look at on your Weekly Optimization Day? *(Answer: The last 7 to 14 days.)*

Lesson 3: What You Can Do Alone vs. What Needs Approval

****Goal:**** Understand your boundaries as a VA.

****Simple Explanation:**** You must know what you are allowed to touch without asking.

****Do Alone:**** Add negative keywords, pause keywords with 20 clicks and 0 sales, lower bids on high ACOS keywords, download reports.

****Ask for Approval First:**** Increasing the total campaign budget, raising bids above the suggested range, launching a brand new campaign, changing the product listing (price/images).

****Check Yourself:**** If you want to increase the daily campaign budget from \$20 to \$100, should you just do it? *(Answer: No, you must ask the client or manager for approval first.)*

MODULE 13: Client Communication

Lesson 1: Setting Expectations Early

****Goal:**** Learn how to prevent client anxiety.

****Simple Explanation:**** Clients often think PPC is magic. They think they will spend \$10 today and make \$100 tomorrow. You must tell them the truth: "PPC takes 2 to 4 weeks to gather enough data to optimize. The first few weeks are about buying data and testing. ACOS might be high at first."

****Check Yourself:**** How long should you tell a client it takes for a new campaign to stabilize? *(Answer: 2 to 4 weeks.)*

Lesson 2: How to Report Bad News

****Goal:**** Learn to handle problems professionally.

****Simple Explanation:**** Sometimes, a campaign loses money. Do not hide it. Do not wait for the client to notice. Tell them immediately, but **always bring a solution**.

Bad: "Sorry, we lost \$50 this week."

Good: "Our ACOS spiked to 50% this week because a competitor launched a massive sale. I have already lowered our bids and added negative keywords to protect the budget while we wait for their sale to end."

Check Yourself: What should you always include when reporting a problem to a client?

(Answer: The solution or action you have already taken to fix it.)

Lesson 3: The "Approval Request" Template

Goal: Learn how to ask to spend more money.

Simple Explanation: When you find a great keyword and want to raise the bid, use this exact template to ask the client:

"Hi [Name], I found a great keyword ('organic dog shampoo') that has a 15% ACOS. I'd like to raise the bid from \$1.00 to \$1.20 to get more impressions. The goal is to increase sales. The risk is a slightly higher CPC. Do I have your approval?"

This makes it easy for them to just reply "Yes."

Check Yourself: Why do we explain the "risk" when asking for approval? *(Answer: To build trust and show that you are thinking carefully about their money.)*

MODULE 14: Capstone Project

Lesson 1: The Capstone Scenario

Goal: Understand your final test.

Simple Explanation: You are now acting as the Lead PPC VA for a new client.

The Product: Premium Bamboo Cutting Board.

The Price: \$25.00

The Profit Margin: 30% (Break-Even ACOS is 30%).

The Monthly Budget: \$600 (\$20/day).

Your job is to set up the account, review the first week of data, and write the client report.

Lesson 2: Step 1 - Campaign Setup

Goal: Build the foundation.

Task: In your practice sandbox or spreadsheet, write out the exact names, budgets, and match types for your Beginner 2-Campaign Strategy (One Auto, One Manual Exact). List the 5 Exact keywords you will start with.

Check Yourself: What should the daily budget be for each campaign if the total is \$20/day?

(Answer: \$10 for Auto, \$10 for Manual Exact.)

Lesson 3: Step 2 - Search Term Cleanup

Goal: Prove you can mine data.

Task: You will be given a mock Search Term Report with 20 rows of data. You must highlight the "Winners" to move to Exact, and highlight the "Wasters" to add as Negatives. You must explain **why** for each choice.

****Check Yourself:**** If a search term has 2 clicks and 0 sales, do you add it as a negative?
(Answer: No, 2 clicks is not enough data. Leave it alone.)

Lesson 4: Step 3 - The Final Client Email

****Goal:**** Prove you can communicate.

****Task:**** Write a 1-paragraph email to the client summarizing the first week. Include the Spend, Sales, and ACOS. Mention one "Win" and one "Next Step."

****Check Yourself:**** Should your email be full of complex PPC jargon? ***(Answer: No, it should be in plain, simple English.)***

Lesson 5: Graduation and Next Steps

****Goal:**** Transition from student to professional.

****Simple Explanation:**** If you pass the Capstone, you are officially a Junior PPC Virtual Assistant. You are ready to manage small accounts under the supervision of a Senior Manager.

****Your Next Steps:****

1. Always use your checklists.
2. Never guess; always look at the data.
3. Protect the client's budget like it is your own money.
4. Keep learning, because Amazon changes its features every few months.

****Congratulations, Ryan!****

You now have the ****entire, comprehensive student-facing copy deck**** for the Amazon PPC Virtual Assistant course.

****How to use this deck:****

1. ****For your Web App / LMS (LearnDash, Teachable, Kajabi, etc.):**** Copy and paste the "Simple Explanations" into the text body of your lessons.
2. ****For Video Scripts:**** Read the "Simple Explanations" and "Examples" directly to the camera.
3. ****For Quizzes:**** Use the "Check Yourself" questions as your multiple-choice or short-answer quiz questions at the end of every lesson.
4. ****For Worksheets:**** Turn the "Tasks" in the Capstone and Artifacts sections into downloadable PDFs.

If you need help turning the UX/App copy (from the previous prompt) into wireframes, or if you need to write the actual quiz answer keys and grading rubrics, just let me know!
